Shadab Hasnain Khan

Hayward, CA 94545 | 510 938 0120 | shadabhasnainkhan@gmail.com | github.com/HasnainKhan01

SUMMARY

Full-stack developer (CS degree, Cal State East Bay) and CompTIA Security+ certified, with hands-on experience building and deploying secure MERN-stack web applications. Seeking an entry-level software engineering role where I can contribute immediately and grow.

EXPERIENCE

AI Trainer – Communication Expert | Handshake AI Fellowship (Contract, Remote) | April 2026 – Present

- Developed and evaluated prompts to assess how well large language models (LLMs) communicate, judging clarity, tone, structure, and audience fit.
- Analyzed LLM outputs against written criteria and gave detailed expert feedback to improve how AI models explain complex topics.
- Conducted independent research to support prompt design and evaluation tasks.

Event Coordinator | MESA Institute of STEM, Hayward, CA | August 2022 – May 2023

- Planned and supported special events and community programs, handling organization and logistics so events ran smoothly.
- Communicated information to attendees, staff, and community members, representing the organization professionally.

PROJECTS

Foundation Tracker | foundation-tracker-pro.vercel.app

- Designed and built a full-stack habit tracker around a floor/ceiling model (a minimum that counts as a win, plus a stretch goal), solo and end to end, deployed on Vercel and Render.
- Built an Express/Mongoose REST API with one upserted document per day and date-range queries powering a weekly snapshot view.
- Implemented click-to-toggle logging with optimistic UI updates in React (Vite, React Router); gated a private guide page server-side so its password and content stay out of the public bundle and repo.

Salah Times Web App | hasnainkhan01.github.io/salah_app

- Built a PWA in React that shows the five daily prayer times for the user's live GPS location via the Aladhan REST API, auto-highlighting the current prayer and showing Gregorian and Hijri dates.
- Added a service worker for offline caching and a web app manifest, making it installable on iOS and Android with a mobile-first dark UI.

Task Manager Web App | task-manager-app-rip6.vercel.app

- Built a full-stack task manager with JWT authentication, bcrypt password hashing, and a RESTful CRUD API; deployed on Vercel and Render with environment-based configuration.
- Optimized MongoDB schemas with indexing and efficient queries, achieving sub-200ms API response times under load testing.

Online Multiplayer BlackJack Application

- Collaborated with a team of four to build a real-time multiplayer blackjack game in Java using TCP/IP networking; authored requirements and use case documents and designed the architecture with UML.
- Implemented secure game logic following OWASP principles; validated with JUnit across 1,000+ simulated game rounds.

SKILLS

- **Languages:** JavaScript, Java, C++, Python
- **Web:** React, Node.js, Express, MongoDB, Mongoose, HTML, CSS, REST APIs
- **Tools & practices:** Git, Agile, SDLC, JUnit, UML, JWT, bcrypt, Vercel, Render
- **Certification:** CompTIA Security+ (secure coding, code reviews, SDLC risk mitigation)

EDUCATION

Bachelors of Computer Science, California State University - East Bay, Hayward, CA | 3.5 GPA, Cum Laude
Relevant Coursework: Security and Info Assurance, Software Engineering & Data Structures and Algorithms
